EER

Relational Schema

Description of Tables

Student

The Student table contains information about each student.

Along with Student ID (as integer) being the primary key, this table has fields of student name, gender, date of birth, address, each of his/her parents' and guardian's names and emails (as text descriptions). CNIC and Contact numbers of guardian and each parent are also integer type fields of the Student table. Lastly it has the field of dateAdded to contain the date when student took admission.

GuardianAccompanying

The GuardianAccompanying table contains information about the guardian accompanying the student of a younger class.

This table has Student ID of the student, the guardian is accompanying, as the primary key. Moreover, the student's name, guardian's name and reason (why mother is not accompanying the student) are text described (Varchar) fields of this table. Pregnancy is yet another text description (Varchar) to know the pregnancy status of the accompanying guardian. Integer data type field of guardianCNIC is also present to hold the guardians CNIC number.

ClassRecord

This table contains the record of the class a student is enrolled in.

It has the field of record as the primary key. StudentID, current class, new class are also its fields represented by integer data type. Date added is yet another field containing the date when student was enrolled in a particular class.

Admin

Admin table contains login information for the admin

It has email field (varchar) as primary key and passcode being the second field that too in varchar.

StudentChallan

Student Challan table holds information about the student fee.

Its has the field of ID as primary key represented in an integer data type. The amount field (integer data type) contains the amount of fee the student has to pay. Along with these, this table has fields of StudentID, student name, his/her father's and guardian's name and email as Varchar data type.

Datasets

Guardian Accompanying

The screenshot shows the phpMyAdmin interface for a MySQL database named 'dbproject'. The 'guardianaccompanying' table is selected, displaying 5 rows. The table structure is as follows:

studentID	studentName	guardianName	guardianCNIC	pregnancy	reason
3	Amna Kamran	Amna Khan	37405999	Yes	Parents are deceased
8	Sohaib Azhar	Hooran Khan	37505333	No	Parents are out of city
11	Hina Aslam	Bisma Khan	37499	No	Parents are out of city
12	Khurram Shahzaman	Kashmala Tariq	36330	Yes	Parents are deceased
20	Ramiz Ali	Samar Khan	373065333	Yes	Parents are out of city

Admin:

The screenshot shows the phpMyAdmin interface for a MySQL database named 'dbproject'. The 'admin' table is selected, displaying 3 rows. The table structure is as follows:

email	passcode
i190536@nu.edu.pk	1234
i190414@nu.edu.pk	1234
i192155@nu.edu.pk	1234

SQL Statements to Create Tables

Creating student table

```
CREATE TABLE student(studentID int NOT NULL AUTO_INCREMENT , studentName
varchar(100), dateofBirth date, studentGender varchar(10), studentClass varchar(10),
fatherName varchar(100), fatherCNIC bigint, fatherContact bigint, fatherEmail varchar(100),
motherName varchar(100), motherCNIC bigint, motherContact bigint, motherEmail
varchar(100), address varchar(50), GuardianName varchar(100), GuardianCNIC bigint,
guardianGender varchar(10), guardianContact bigint, relation varchar(50), dateAdded date,
PRIMARY KEY(studentID));
```

Creating admin table

```
CREATE TABLE admin(email varchar(100), passcode int, PRIMARY KEY(email));
```

Creating studentChallan table

```
CREATE TABLE studentchallan(id int NOT NULL AUTO_INCREMENT, studentName
varchar(100), fatherName varchar(100), guardianName varchar(100), amount int, ngoEmployee
varchar(10), email varchar(100), PRIMARY KEY(id));
```

Creating guardianAccompanying table

```
CREATE TABLE guardianAccompanying(studentID int, studentName varchar(100),
guardianName varchar(100), gurdianCNIC int, pregenancy varchar(50),reason varchar(1000),
PRIMARY KEY (studentID));
```

Creating classRecord table

```
CREATE TABLE classrecord(record int AUTO_INCREMENT, studentID int, studentName
varchar(50), currentClass int, newClass int, dateAdded date, PRIMARY KEY(record));
```

SQL Statements to Populate Tables

QUERIES TO INSERT INTO ADMIN TABLE:

```
INSERT INTO `admin`(`email`, `passcode`) VALUES ('i190536@nu.edu.pk','1234'),

SQL statements as the answer to the needed 15 queries

Query 1 (Stored Procedure):

```
DELIMITER
//
CREATE PROCEDURE allStudents_Name()
BEGIN
    SELECT
        studentID, studentName
    FROM
        student ;
END //
DELIMITER
;
```

Query 2:

```
DELIMITER
//
CREATE PROCEDURE mother_spouses()
BEGIN
    SELECT
        motherName AS "Mothers", fatherName AS "Their Spouses"
```

```
FROM
    student ;
END //
DELIMITER ;
```

Query 3:

```
DELIMITER //
BEGIN
SELECT studentName, GuardianName, relation FROM student GROUP BY studentID;
END //
DELIMITER
;
```

Query 4:

```
DELIMITER
//
CREATE PROCEDURE stundent_parent()
BEGIN
    SELECT
        studentName AS "Name", fatherName AS "Father Name", motherName AS "Mother
        Name"
    FROM
        student ;
END //
DELIMITER
;
```

Query 5:

```
DELIMITER
//
CREATE PROCEDURE sibilings_inSameClass()
```

```

BEGIN
    SELECT
        GROUP_CONCT(s.studentName SEPERATOR ',') AS Siblings , s.studentClass,
s.fatherName
    FROM
        student s
    INNER JOIN(
        SELECT
            st.fatherName,
            st.motherName,
            st.studentClass
        FROM
            student st
        GROUP BY
            st.fatherName,
            st.motherName,
            st.studentClass
        HAVING
            COUNT(*) > 1
    ) stu
ON
    stu.fatherName = s.fatherName AND stu.motherName = s.motherName AND stu.studentClass
= s.studentClass ;
END //
DELIMITER
;

```

Query 6:

Note: We selected all the records added before 2019.

```
DELIMITER //
CREATE PROCEDURE changedClasses_inTimeSpan()
BEGIN
    SELECT
        *
    FROM
        classrecord
    WHERE
        YEAR(dateAdded) <= 2019 ;
END //
DELIMITER ;
```

Query 7:

Note: time span='2021-10-01' has been chosen

```
DELIMITER
//
CREATE PROCEDURE newStudents()
BEGIN
    SELECT
        studentName
    FROM
        student
```

WHERE

dateAdded < '2021-10-01'

GROUP BY studentID

END //

DELIMITER ;

Query 8:

Note: time span='2021-09-01' has been chosen

DELIMITER

//

CREATE PROCEDURE parentInfo()

BEGIN

SELECT

studentID AS "Roll #", studentName AS "Name", dateofBirth AS "BirthDate",
studentGender AS "Gender", fatherName AS "Father Name", motherName AS "MotherName"

FROM

student

WHERE

dateAdded < '2021-09-01' ;

END //

DELIMITER

;

Query 9:

Note: Timespan of 3 days is chosen

DELIMITER

//

CREATE PROCEDURE early_parents()

BEGIN

SELECT

s.motherName, s.fatherName

```

FROM
    student s
JOIN classrecord c ON
    (s.studentID = c.studentID)
WHERE
    DATEDIFF(c.dateAdded, s.dateAdded) > 365 AND DATEDIFF(c.dateAdded,
s.dateAdded) < 369 ;
END //
DELIMITER
;

```

Query 10: To find the class history of student whose ID is 1

```

DELIMITER
//
CREATE PROCEDURE class_History()
BEGIN
    SELECT
        *
    FROM
        classrecord
    WHERE
        studentID = 1;
END //
DELIMITER
;

```

Report 1:

Query to search:

SELECT studentID, studentName, dateofBirth, studentGender FROM student WHERE studentID='\$term';

Query to delete:

DELETE FROM student WHERE studentID = '\$id';

Query to update:

UPDATE student SET studentName='\$name', studentGender='\$gender', dateofBirth='\$birthDate' WHERE studentID='\$id';

Query to display students of class 1:

SELECT studentID, studentName, dateofBirth, studentGender FROM student WHERE studentClass = 1;

Query to display students of class 2:

SELECT studentID, studentName, dateofBirth, studentGender FROM student WHERE studentClass = 2;

Query to display students of class 3:

SELECT studentID, studentName, dateofBirth, studentGender FROM student WHERE studentClass = 3;

Report 2:

Query to search:

SELECT Count(*) AS NumberofStudents FROM student WHERE studentClass='\$term';

Query to get number of students in class 1:

SELECT Count(*) AS NumberofStudents FROM student WHERE studentClass=1;

Query to get number of boys in class1:

SELECT Count(studentGender) AS NumberofBoys FROM student WHERE studentClass=1 AND studentGender='Male';

Query to get number of girls in class1:

SELECT Count(studentGender) AS NumberofGirls FROM student WHERE studentClass=1 AND studentGender='Female';

Query to get number of students in class 2:

SELECT Count(*) AS NumberofStudents FROM student WHERE studentClass=2;

Query to get number of boys in class1:

```
SELECT Count(studentGender) AS NumberofBoys FROM student WHERE studentClass=2  
AND studentGender='Male';
```

Query to get number of girls in class2:

```
SELECT Count(studentGender) AS NumberofGirls FROM student WHERE studentClass=2  
AND studentGender='Female';
```

Query to get number of students in class 3:

```
SELECT Count(*) AS NumberofStudents FROM student WHERE studentClass=3;
```

Query to get number of boys in class3:

```
SELECT Count(studentGender) AS NumberofBoys FROM student WHERE studentClass=3  
AND studentGender='Male';
```

Query to get number of girls in class3:

```
SELECT Count(studentGender) AS NumberofGirls FROM student WHERE studentClass=3  
AND studentGender='Female';
```

Report 4:

Query to get a student' record:

```
SELECT * FROM student WHERE studentID='$studentID';
```

Query to get siblings:

```
SELECT studentName FROM student WHERE fatherCNIC IN(SELECT fatherCNIC FROM  
student WHERE studentName = '$studentName') AND studentName <> '$studentName';
```

Report 5:

Query to get a student' record:

```
SELECT * FROM student WHERE fatherCNIC='$fatherID' AND motherCNIC = '$motherID';
```
